Custom is what sets us apart...

Our Mission

To provide our clients with high-quality, fully-customizable work-space products that integrate seamlessly with the existing products that they sell and service.

To provide low-cost, customized, alternatives to high-priced, hard-to-find or out-of-stock major-manufacturer products.

To partner with dealers to provide fast, reliable, top-notch services and solutions that enhance the customer experience. And as always...

To Bring New Life to Interiors.

NEW LOCATION

95 Hilliard Street
Manchester, CT 06042

(Next to The Time Machine)

We Know the Products You Sell...

Company History

Bruce Peristere purchased Recovery Zone, the division he headed for 15 years, from office furniture giant Revest Northeast (a division of BKM) in 2012.

Begun in the late 80's primarily to recover office furniture, Recovery Zone eventually expanded to include recovery of Medical and Dental Equipment, becoming the vendor of choice for the local Hartford area Hospitals.

In the early 2000s Recovery Zone expanded from upholstery services to include Acoustical Paneling, Desk Dividers and Tackboards as part of their Product Line. Today, Recovery Zone is two distinct entities Upholstery Services and Acoustic Paneling / Tackboards.

In 2016 Recovery Zone expanded into its own location at 95 Hilliard Street.

What Makes Us Different

We are not furniture dealers. What we offer are customized solutions to problems you and your clients encounter on a daily basis in regards to workspace challenges.

What RZ Can Do For You

While Major Manufacturers offer one-size-fits-all solutions to workspace challenges we know that isn't always the case. We allow you the flexibility to customize when a custom solution is the best answer. We allow you the ability to find lower-cost alternatives when budget is a consideration. We allow you to adjust on-the-fly when the clients changes his mind. We can reverse-engineer any manufacturer's product to come up with a better, more cost-effective alternative. We are a one-stop-shop that can help you satisfy a client with everything from conceptualization, to delivery and installation.

We afford you the opportunity to do what you do best - satisfying the customer.

- No Job Too Large
- Free No-Obligation Quotes
- Fast Turnaround
- 10,000 Square-Foot Facility
- Locally Owned & Operated
- Pickup & Delivery / Mobile Services
- 2-Year Warranty on Workmanship

**SoundLite Acoustical Panels are
100 % tackable!**

Choice of Edge

SoundLite Acoustic Panels are available in choice of 3 edges at no additional cost. Specify when ordering.

SoundLite Acoustic Paneling

Placing Acoustic Panels on walls or ceilings is the best way to eliminate echo, reverb and reduce overall ambient noise in any room. Common sound issues are caused mostly by sound waves reflecting off walls. Therefore strategically placing acoustical panels on your known reflection points will not only effectively clean up the sound in the room, but the right amount will eliminate all echo and noise issues. With over 100 colors to choose from and virtually unlimited possibilities with our full color graphic image printing, your acoustic treatment will not only take care of your sound issues, but add extra flair and style to your space's decor.

Built to Last

Soundlite Acoustical Panels are constructed of fiberglass wrapped in fabric. Therefore they are lightweight, yet durable. All fiberglass core edges are impregnated with water-based penetrating sealer designed to stiffen the edges. For a nominal charge a chemically hardened edge can be added for a cleaner edge and more durable product.

Unlimited Possibilities

Our acoustical panels can be customized in nearly limitless ways to match any existing décor. Fabrics come in 45 Standard Colors with unlimited custom colors, patterns also available.

Sound Absorption Coefficients

1-inch panels		2-inch panels	
1/3 Octave Band Center Frequency (Hertz)	Absorption Coefficient (Sabins/m <)	1/3 Octave Band Center Frequency (Hertz)	Absorption Coefficient (Sabins/m <)
200	0.20	200	0.66
250	0.28	250	0.82
315	0.42	315	1.00
400	0.57	400	1.05
500	0.75	500	1.13
630	0.87	630	1.09
800	0.96	800	1.09
1000	1.03	1000	1.08
1250	1.05	1250	1.05
1600	1.05	1600	1.05
2000	1.05	2000	1.05
2500	1.05	2500	1.04
SAA = 0.77 NRC = 0.80		SAA = 1.01 NRC = 1.00	

How much noise will they actually control?

Acoustical Absorption in fiberglass varies with the density and material thickness of the panel. Recovery Zone offers a standard 1" or 2" thick panels with a rated material density of 6 pounds per cubic foot. Custom sizes may be available on request. These panels were tested as a complete assembly in accordance with ASTM C 423-99a. The value of sound absorption average (SAA) and the noise reduction coefficient (NRC) for the 1"-panel are .77 and .80 respectively. The values of SAA and NRC for the 2" panel are 1.01 and 1.0 respectively.

Are they Fire Rated?

Yes, flammability was conducted as a complete assembly in accordance with ASTM E-84-01 using Guilford of Maine FR-701 Fabric. The assembly meets a flame spread index of 25 and smoke index of 50.

Click to learn more about fire Ratings.

What about existing electrical outlets and wiring?

Not a problem. Our acoustical panels can be designed to accommodate any number of "obstacles." Professional installers can handle all aspects of electrical work if needed.

Are they difficult to install?

No. Ease of use is a hallmark of Recovery Zone's Soundlite Acoustical Panels. These panels are lightweight, easy to handle and can be mounted on a variety of surfaces such as walls, filing cabinets, ceilings or any verticle surface which will allow for installation with a variety of mounting hardware.

Are they permanent or temporary?

Both. Our acoustical panels can be designed either permanent or temporary installation. Can be mounted in a variety of ways including wall, ceiling, hanging, etc.

Are they difficult to install?

No. Ease of use is a hallmark of Recovery Zone's Soundlite Acoustical Panels. These panels are lightweight, easy to handle and can be mounted on a variety of surfaces such as walls, filing cabinets, ceilings or any verticle surface which will allow for installation with a variety of mounting hardware.

Will installation cause any structural damage?

Absolutely not. Our acoustical panels are designed for semi-permanent installation and can be mounted in a variety of ways that will not damage any existing structure.

Acoustical Panel Application Guide

Attaching to	Recommended Device (Supplied by Installer)
Wood	Metal Clip with screws or Velcro
Sheetrock	Metal Clip, screws and anchors
Metal (filing cabinets, etc.)	Magnetic
Glass	Velcro or double-sided tape
Masonry	Metal clip
Alternative	Construction Adhesive (not supplied)
Alternative	Z-Bar (supplied at additional cost)

Designed for WALL-MOUNTED applications.

CAUTION!!! SoundLite Acoustical Panels **WILL NOT** hold a screw. Backing is too soft to support a screw.

FOR CEILING INSTALLATION:

Can be hung from a hook and wire system or flush mounted with Permanent Anchor System.

Z-BAR INSTALLATION:

Can be installed professionally on-site at an additional cost.

ACCOMODATING ELECTRICAL WIRING AND OTHER OBSTACLES:

A "WIRE-WAY" can be added to any panel at an additional \$8 per panel.

IMPORTANT: *If a Wire-Way is needed a schematic is required that specifies where and on which panels they are required. Panel Style numbers and desired quantity of wire-ways need to be specified on purchase order. For questions or additional information regarding wire-ways please contact Recovery Zone.*

Side-view of Wire-Way

Wire-Way cutouts are 2" wide and 1/2" deep

STANDARD ACOUSTIC PANELS

- 1" or 2" Thicknesses
- Thousands of Colors and Patterns
- Sizes from 1' x 1' to 4' x 8'

CUSTOM ACOUSTIC PANELS

When people think of acoustic paneling a "square" is usually what comes to mind. But standard isn't what we do at RZ. What we can design is only limited by your imagination. Enhance your interior environment on multiple levels with custom-made panels.

- Add logos or corporate themes
- Text and graphics
- Custom shapes and silhouettes

HANGING BAFFLE

Hanging Baffles are an economical way to reduce sound pressure levels and lower reverberation. They are effective in small spaces to block sound where there are gaps between walls and ceilings or in any large spaces where sound control is an issue and a drop ceiling is not feasible.

These baffles are easily suspended from existing open truss and pre-engineered suspension systems. They are designed to hang freely, allowing free flow of air and integrate exceptionally well with existing sprinklers, lighting and HVAC systems.

Round Clouds

Square Cloud

CLOUD BAFFLE

Unlike a hanging baffle that is typically suspended perpendicular to the ceiling, the Acoustic Hanging Cloud is a 1-sided acoustical panel that can be hung parallel to the ceiling or at any other angle. It is often used where a hard reflective ceiling is exposed, but pipes and ductwork on the ceiling do not leave enough room for direct ceiling attachment. These acoustic hanging cloud panels can be suspended via wire, chain or cable below the pipes and ductwork.

Additional design elements can be added to a room by making the hanging clouds in a non-standard shape, or by hanging them at angles other than parallel to the ceiling.

WINDOW FILLER PANELS

Window Filler Panels are an economical way to reduce or eliminate sight lines into areas of an office that need to be private without altering the physical structure.

Additionally, RZ Window Panels maintain an acoustic quality, helping to reduce conversational or mechanical noise. They are perfect for conference rooms, interview areas, classrooms, breakrooms, etc.

RZ Window Panels are a non-permanent space solution and can be added or removed with relative ease. They are also 100% tackable and can double as a bulletin boards or posting area.

- Panels can be “press-fit” into most any frame.
- No need for hardware
- No need for drilling or damaging to wall surfaces or window frames.

CORNICE & VALANCE BAFFLE

Valance Baffles are a quick and easy way to hide unsightly hardware and reduce any applicable noise associated with that equipment. RZ Valance Baffles add a decorative and sound dampening quality to any interior space. These panels are also 100% tackable. Can be “press-fit” around existing moulding for ease of installation and can be removed with ease to access hardware beneath.

PANEL STACKER

Panel Stackers are an economical way to reduce or eliminate sight lines into areas of an office that require extra privacy, such as workstations that may contain sensitive information.

RZ Panel Stackers offer sound absorption qualities, designed to keep private conversations private. They are also inherently tackable, and can increase the organizational efficiency of a workstation by offering more postable space.

RZ Panel stackers are a non-permanent space solution and can be added to or removed from existing cubicle paneling without the need for professional installation or hardware.

After
Sightlines into workspace are now obscured.

Before
Notice how monitor, files and papers are in clear view of passers-by.

DOOR PANEL

Door panels are an economical way to reduce or eliminate sight lines into areas of an office that are unattractive or may contain sensitive equipment or confidential materials without replacing or damaging the existing doorway.

Additionally, RZ Door Panels maintain an acoustic quality, helping to dampen equipment noise or keep confidential conversations private. They are perfect for human resource offices, medical consultation rooms, server and database equipment closets, etc.

These panels are also 100% tackable and can double as a bulletin board or notice posting area.

After _____
Equipment is now concealed. Not only has data security been improved but the aesthetic is cleaner and more formal.

Before _____
Notice server and database equipment are visible. This leaves data security vulnerable.

MODESTY PANEL

RZ Modesty Panels are an economical way to add an extra measure of privacy and security to any desk or worksurface.

Customizable to nearly any size or shape, a modesty panel offers increased security, allowing the user to store personal items, such as purses, out of site. RZ Modesty Panels are available in a wide range of colors and styles improving the aesthetics of any office interior while hiding the array of wiring under a work surface from the ubiquitous computer and helping to secure the computer itself.

Additionally RZ Modesty Panels are also 100% tackable and can help maximize square-footage of a workspace. Made from the same materials as our acoustic panels, RZ Privacy Panels will also help reduce noise.

Raised Modesty Panels increase the security and usability of a workstation.

Many pre-fabricated workstations are inadequate at providing enough privacy and security for its users.

PRIVACY PANEL

When office space is limited RZ privacy panels are a space-saving solution. RZ privacy panels can be configured in numerous ways to help delineate separate departments and maintain privacy between workstations.

Configurable privacy panels work great in collaborative and open space environments, training areas, lobby or lounge areas. Custom design elements let you use the moveable panels to create a work space that compliments both traditional office décor, as well as enhancing a modern or contemporary office look.

Additionally RZ Privacy Panels are also 100% tackable and can help maximize square-footage of a workspace. Made from the same materials as our acoustic panels, RZ Privacy Panels will also help reduce conversational noise.

- Keep valuable items such as tablets and laptops out of view.
- Keep valuable data such as credit card info out of view.
- Create privacy in open floor plan work spaces
- Fully tackable - increases efficiency
- Fully Customizable to any interior environment

ANGLED BAFFLES

Angled Baffles are acoustic paneling designed to improve sound quality by reflecting sound waves away from corners and hard ceiling materials where they tend to reverberate most.

Angled Baffles are also effective at preventing noise transmission through the ceiling cavity between offices and other rooms.

Uniquely suited to both new and retro fits, angled baffles can be easily installed around existing services. Angled Baffles can be custom designed to fit virtually any space and tend to work best when used as part of a stacked baffle system.

TACKBOARDS

RZ Tackboards are a great way to add functionality to any interior space. Our standard tackboards are durable, sustainable and attractive. Available with an almost unlimited array of fabric coverings, they will complement any interior space.

Use them in offices, conference rooms, modular workstations, hallways and any area you need a tackboard. Made with a rigid fiberglass core and backed with medium-density fiberboard, these tackboards hold extremely well and can be tacked repeatedly with no degradation in performance.

Our tackboards can be covered to match any existing decor or theme. Custom artwork, logos or graphics can be added as well.
